Liberty®
NOTES PLUS

Redefining Real-Time Transcription

AI Speed with Human Moderation

Liberty Notes Plus is a cutting-edge extension of Liberty Court Recorder (LCR) that brings real-time transcription, searchability, and live captioning to the courtroom. Powered by Microsoft Azure, Notes Plus delivers a raw transcript of the in-room audio, displayed in a two-pane interface. The left pane shows the speech-to-text results, while the right pane logs timestamped "Notes Bookmarks" that can be inserted dynamically into the text.

With the ability to search words instantly, save all text in RTF format, and optionally configure the interface to display live captions on in-room displays, Liberty Notes Plus meets the growing demands of courts for fast transcription and easy retrieval of information.

with Unmatched Potential

Microsoft Azure-Powered Speech-to-Text

provides courts with high-quality, real-time transcription at a competitive price, offering one of the best accuracy-to-cost ratios available. With scalable pricing models, courts can manage their own billing based on their specific needs, whether they require hundreds of hours or just a few per year. Many government and judicial entities already use Microsoft 365, making Azure easy to acquire and maintain, while its compatibility with familiar tools like Microsoft Word ensures a seamless workflow. Transcription files are saved in Rich Text Format (RTF), and can be opened in Word, simplifying post-recording review and enhancing integration into existing court systems.
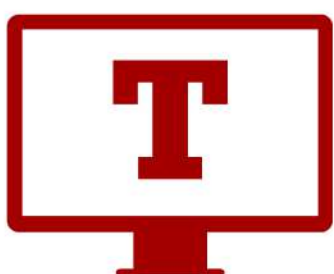

Predefined Phrases

enables the court to set up commonly used phrases or names that may be challenging to spell or have specific formatting requirements, such as legal terms, court names, or individuals' names. Once a match is identified in the transcription process, the speech-to-text engine automatically inserts the predefined phrase directly into the text. This ensures consistency and accuracy in the transcription of frequently used terminology, minimizing errors and reducing the need for manual corrections.

Note Bookmarks

allows individual users to insert timestamped notes directly into the speech-to-text transcript, either during the session or afterward. This is especially helpful for making personal notes or correcting transcription errors that may arise from real-time processing. Users such as judges, attorneys, or court staff can connect to the in-room recorder from their own PCs, but each user's notes remain independent. This gives users the flexibility to take their own notes without affecting the generated transcript or interfering with others.

Large Format Captioning

enhances accessibility in the courtroom, making it easier for participants to follow along in real time. By providing an option for large format captions, Liberty Notes Plus helps courts meet ADA compliance and expand access to justice for individuals with hearing impairments or other accessibility needs.
