

Liberty Virtual Courtroom – Zscaler Configuration

All changes made in Zscaler Internet Access (ZIA) Admin portal

Administration > Network Services

Add TCP Ports

1. Add Network Service
2. Under TCP Destination Ports, add 8180
3. Click Save to finish

Add UDP Ports

4. Add Network Service
5. Under UDP Destination Ports, add 3479 and 50000-50999
6. Click Save to finish

Network Services

Services Service Groups				
+ Add Network Service				
No.	Name		TCP Destination Ports	UDP Destination Ports
1	Liberty Virtual Courtroom TCP Ports		8180	---
2	Liberty Virtual Courtroom UDP Ports		---	3479, 50000-50999

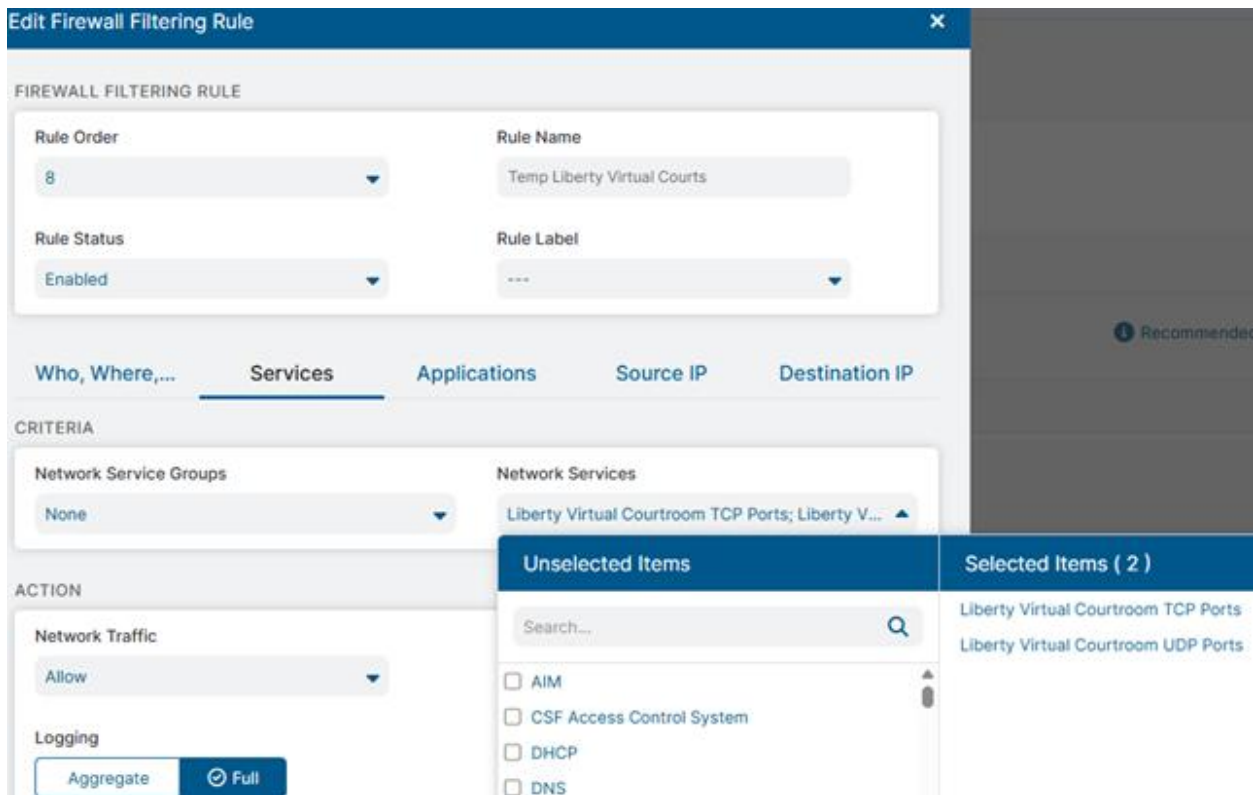

Policy > Firewall Control

Add Firewall Filtering Rule

1. On the Services tab, select the two Network Services you previously created
2. On the Applications tab, select HTTP3, HTTPS, QUIC, RTP, STUN, and WebSocket
3. On the Destination IP tab, in the IP Address or Wildcard FQDN, add the IP address and domain issued by High Criteria (Liberty Recording).

(see screenshots below)

On the Services tab, select the two Network Services you previously created

Update June 2026:

In addition to the above, Amazon AWS may need to be added from the 3rd-Party App Governance Dashboard.

For more information, please consult Zscaler documentation:

<https://help.zscaler.com/zia/about-3rd-party-app-governance-dashboard>
